titer

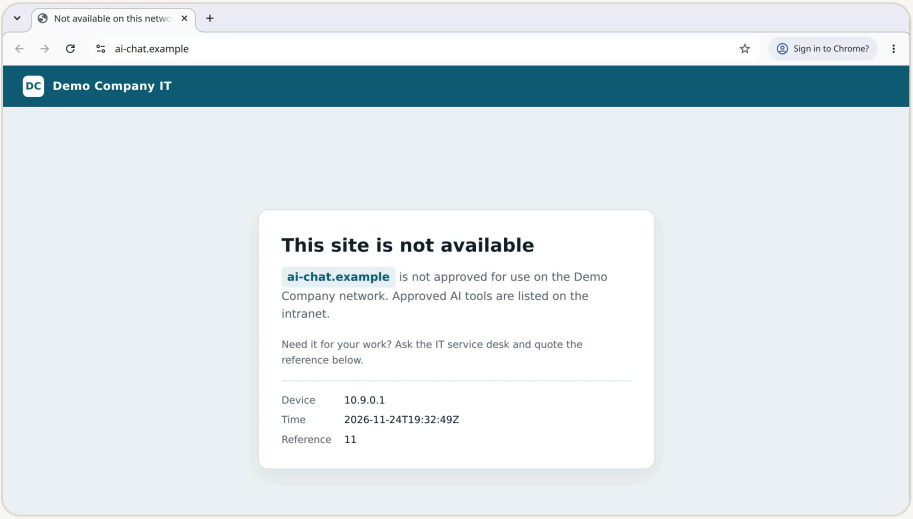

FOR MANAGED SERVICE PROVIDERS

# Web filtering and AI policy as a service you run.

One policy for many customers or branch offices: titer runs in your infrastructure or the customer's, with block pages in each customer's branding and metrics across the fleet.

Activity per login, in the titer Grafana dashboard

A block page in a customer's own branding

- **Central policy:** many titer instances take their policy and blocklists from Redis or Riak; a change reaches every site at once.
- **Separation per customer:** one instance per customer, or a separate entry point with its own policy on a shared service.
- **Fleet-wide metrics:** traffic, blocks and AI use per site and per login in Prometheus and Grafana, with the alerts that ship with titer.
- **Two tiers to offer:** web filtering with the free edition, AI usage control as an added service with titer-extra.
- **Licensing:** offering titer as a service to others needs a licence, arranged on request.
