titer

FOR DEVICE MAKERS

Small enough to ship inside a router.

titer runs on OpenWrt routers and embedded Linux as well as on servers: web filtering, policy and AI control in a program of a few hundred kilobytes to about two megabytes.

The built-in block page, in Firefox

- **OpenWrt packages** from 104 KB, in three sizes; titer-extra on routers with 16 MB of flash and 128 MB of RAM or more.
- **Static binaries** for x86-64, ARM64, ARMv7 and MIPS Linux, statically linked: nothing else to install.
- **Low memory use:** 2,539 bytes of titer's memory per open relayed connection, measured.
- **Your brand on every refusal:** block pages in your wording and design.
- **Licensing for devices:** bundling titer into a product or device needs a licence, arranged on request.

Size of each edition

titer titer-extra

Program, x86-64 Linux

titer: 0.55 MB

titer-extra: 2.15 MB

Container image

titer: 0.77 MB

titer-extra: 2.44 MB

Version 1.0.0, read 24 November 2026: the program built from the release source for x86-64 Linux (GCC 13.3, stripped); the container images titer:1.0.0 and titer-extra:1.0.0 as the container engine reports them. titer-extra holds the AI decoding, decryption and agent control the free edition does not have.
